

Event Management System

Software Engineering Mini-Project

Team-7:

Sham Santhosh S (PES2UG24CS455)

Shaurya Ishan (PES2UG24CS464)

Shayna Zaidi Gupta (PES2UG24CS465)

Shriya C Rao (PES2UG24CS496)

Proposed project description

The PES University Event Management System is a web-based platform designed to centralize the creation, organization, promotion, and registration of university events.

Currently, event information and registrations are distributed across different communication channels and forms, making it difficult for students to discover events, register, track their participation, and also for the organizers to manage registration and attendees.

Proposed users:

1. Students: Browse events, register for events, view registrations
2. Event Organizers: Post events, manage registrations

Major modules:

1. Authentication and User Management
2. Event management
3. Event Discovery
4. Registration

Our proposed system will provide a single platform which fulfills the following functional requirements:

ID	Requirement	Description
FR-1	User Sign-in	The system shall allow login using college credentials.
FR-2	User Authentication	The system shall authenticate users using valid credentials.
FR-3	Role Management	The system shall provide different permissions for students and organizers.
FR-4	Event Creation	The system shall allow organizers to create events, providing event details.
FR-5	Event cancellation	The system shall allow organizers to cancel events.
FR-6	Event Discovery	The system shall allow students to browse past and upcoming events.

FR-7	Event Search	The system shall allow students to search for specific events using keywords.
FR-8	Event Registration	The system shall allow students to register for available events
FR-9	Capacity Management	The system shall prevent registration once capacity is reached.
FR-10	Registration History	The system shall allow students to view previously attended events.
FR-11	Participation Management	The system allows organizers to view registered participants.
FR-12	Attendance Tracking	The system allows organizers to manage attendance at the event.
FR-13	Event status	The system maintains event status.
FR-14	Reporting	The system maintains and displays analytics and reports of attendance and registrations for organizers.

Plan of work and product ownership:

Ownership Plan:

- Sham Santhosh:Registration & Participation
 - 1)Event Registration
 - 2)Capacity Management
 - 3)Registration History
 - 4)Participation Management
- Shaurya Ishan: Authentication & Role Management
 - 1)Sign-in
 - 2)Authentication
 - 3)Role Management
- Shayna Zaidi: Event Management & Discovery
 - 1)Event creation
 - 2)Event cancellation
 - 3)Event Status
 - 4)Event Discovery
 - 5)Event Search
- Shriya C Rao:Attendance & Reporting

1)Attendance tracking

2)Registration/attendance report
